

FRESHLY SET:
OUR NEW
VERTICAL BLINDS

création **baumann**
systems

VERTICAL OUTLOOK

With the new vertical blinds, Création Baumann is expanding its range of functional and aesthetic products and opening up even more possibilities for combining systems and curtain fabrics.

TEXTILES WITH FUNCTION

The new vertical blinds in the Glare & Heat range are particularly suitable for sun-exposed windows and can be individually controlled. They bridge the gap to the roller blinds and curtain fabrics from the new Glare & Heat collection and expand the field with even more possibilities. In addition, the Blackout novelty allows rooms to be gradually darkened according to need.

TEXTILES WITH DESIGN

The new digital prints create exciting effects and sophisticated designs, turning them into real works of art on the window. The laser designs inspired by nature and graphics create delicate plays of light and shadow in the room and can be arranged individually as desired.

SCREENTECTUS

GLARE AND HEAT PROTECTION

SCREENTECTUS and SCRELINO both have excellent properties in the area of glare and heat protection. SCREENTECTUS with its aluminium-metallised reverse side ensures the best values and individual sun protection. The finely mottled screen fabric SCRELINO does without metallisation and can be combined particularly well with the SCRELAN R of the same type from the roller blind collection - vertically and horizontally in harmony.

DENSINUS

BLACKOUT

With DENSINUS, the lighting conditions can be controlled very easily. The darkening function gradually darkens the room, depending on the position of the vertical slats. DENSINUS is a perfect match for the DENSO R fabric of the same type from the roller blind collection and opens up scope for a wide range of combinations.

FANFARE

EXPRESSIVE DIGITAL PRINTS

The two digital prints FANFARE and RAYS create special moments at the window. FANFARE depicts a continuous branch over several slats, growing from the floor or hanging from the ceiling, as desired, to green up the room. With its artistic colour gradient, RAYS emphasises the effect of the light falling on the slats and creates a fascinating effect.

LASER ROSA V

EFFECTIVE LASER DESSINS

The fine flowers of LASER ROSA V can be arranged individually to reveal delicate flowers or sweeping tendrils. LASER LETTERS V captivates with a graphic filigree design of capital letters. The design of LASER SMILE V is reminiscent of fish scales, which adorn the slats here as an elegant pattern. The playful, slightly three-dimensional dot pattern of LASER CIRCLE V creates a lively shape and a sophisticated play of light.

In addition to the new vertical blinds, three roller blind fabrics have been added to the range. SCREENTEC R with excellent glare and heat protection function, which is the counterpart to the new SCREENTECTUS, as well as two jacquard fabrics, PINELLA R and TOCCA R, which expand the field in the roller blind textile segment.

CRÉATION BAUMANN Where light and space meet, Création Baumann systems ensure a perfect balance of aesthetics and function. This is backed by a unique art of weaving, making the Swiss label a globally leading textile brand, and the expertise to transform world-class fabrics into outstanding systems.
