

Office

# A. T. Kearney Office Project – Tokio

Flexible room partitioning with acoustic curtains that still let light through.

## Starting Point

Instead of numerous small rooms divided by fixed walls, a flexible modular system with curtains was created. The room layout can thus be adapted according to the size of the project team. This new room layout not only changes the appearance of the room, but also had a great influence on the cost savings during construction, especially for the air conditioning and fire protection system.

## Solution

The semi-transparent acoustic textiles allow the outside light to reach the inside of the room even when the curtains are closed. In addition, the sound absorption creates a pleasant ambience. Curtains in different, neutral colours fit together harmoniously without looking boring.
