

Education/Culture

Radboud University – Nijmegen

The metallised curtain fabrics create the right atmosphere in a university building with lots of glass.

Starting Point

Radboud University is a broad-based, research-orientated university with almost 20,000 students. As the architectural design of the building with large glass areas deliberately allows lots of light in, the interior designers were specifically looking for curtain fabrics that offer both glare and heat protection.

Solution

The metallised GUARD and SHADOW MEDIUM serve as a solution. Both textiles are characterised by a neutral range of colours and offer maximum glare and heat protection.

The curtains decorate the façade, both on the outer façades and on the covered courtyard.

Textiles Used

GUARD IV -285

Article-Number: 0101995

Use: Transparent/semi-transparent curtain fabric

Number of colors: 6

Material: 100% Flame retardant (Trevira CS)

Fabric width: 285 cm/112 inch/3.12 yard

Weight: 123 g/m²

Light fastness: 5

SHADOW MEDIUM II -285

Article-Number: 0102010

Use: Dense curtain fabric

Number of colors: 7

Material: 100% Flame retardant (Trevira CS)

Fabric width: 285 cm/112 inch/3.12 yard

Weight: 151 g/m²

Light fastness: 5
